① **VDSL interface**
Use the supplied DSL cable for the IP-based line to connect the VDSL interface and the provider's telephone socket. For more information, please contact your Internet service provider.

② **Ethernet interfaces**
Use the cable with the kiwi-colored connectors to connect one of the interfaces ETH 1 to ETH 4 to your PC or a LAN switch.

③ **Analog interfaces**
Connect analog terminal devices to the analog interfaces either directly via RJ11, or with the help of the enclosed TAE adapters.

④ **Configuration interface**
Use a serial configuration cable to connect the serial interface (COM) to the serial interface of the device you want to use for configuring / monitoring (separately available).

⑤ **ISDN interfaces**
ISDN 1:
Internal (NT) or external (TE) ISDN bus.
This feature is controlled by LCOS.
ISDN 2:
Internal (NT) ISDN bus.

A 100-Ohm resistor for line termination is switchable in LCOS.

⑥ **USB interface**
You can use the USB interface to connect a USB printer or a USB memory stick.

⑦ **Power**
After connecting the cable to the device, turn the bayonet connector 90° clockwise until it clicks into place.
Use only the supplied power adapter.

90°
Please observe the following when setting up the device

> Do not rest any objects on top of the device

> For devices to be operated on the desktop, please attach the adhesive rubber footpads

> In case of wall mounting, use the drilling template as supplied

> Keep the ventilation slots on the side of the device clear of obstruction

> Rack installation with the optional LANCOM Rack Mount (separately available)
